Wheel Straightening equipment

GAHO GH-720

Straighten all kinds of wheels quickly and easily with this next-generation machine.

With the GAHO-720 you can **straighten 13" to 24" steel and alloy wheels in minutes** and professionally.

The equipment uses a **piston actuated by a hydraulic unit** that, conveniently located, pushes on the damaged part of the rim, **bringing it back to its original shape.**

*Wide range
of work*

*Robust
structure*

*Straightens all
types of tires*

*Simple and easy to
replace hydraulic
system.*

*With few
moving parts*

WHEEL STRAIGHTENING EQUIPMENT GAHO GH-720

When it comes to straightening a steel wheel, the repair is much quicker and easier, since being made of a less rigid material, they do not crack or break easily with an impact, they only deform and do not require applying heat to return it to its original shape.

Repair wheels quickly and recover your investment in no time!

Patented high-quality technology

This equipment is manufactured in our plant in Ituporanga, Brazil **under strict quality control**. Being manual hydraulic equipment makes it portable equipment, to carry out work inside or outside the workshop.

Throughout its **more than 28 years in the market**, GAHO has practically created a category of tools for services related to camber, caster, technical axle alignment, and wheel straightening.

Earning the trust of its clients in more than 18 countries mainly through the quality and solidity of its equipment. The company owns the patent for the Camber Hydraulic Straightener and hydraulic spring compressor.

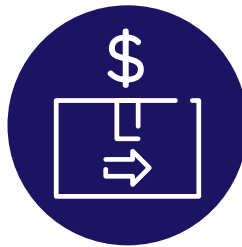

The company, which was born with innovation, maintains a course **focused on quality and user satisfaction**, updating and improving its equipment.

Over 28 years in the market

customers from 18 countries

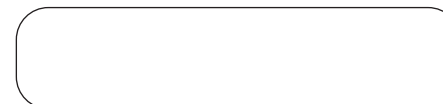

more than 90.000 units sold
